

Main advantages of Storage Heaters

- Moderate cost and very low maintenance.
- Installation is simple and the heater units are robust.
- With off peak and solar power, operating costs can compare to gas heating.
- An excellent option for users outside the gas distribution area.
- 100% efficient and all energy consumed by the heater enters the heating space.
- No toxic emissions that can be hazardous
- Can be CO₂ free using renewable energy sources such as solar, wind and hydro.

HEATPAC SMART STORAGE HEATING

The safe, easy way to save money on heating

HEATPAC HEATING is affordable, luxuriously comfortable, silent, maintenance free, ideal for renovators, cost efficient with smart heating controls.

STORAGE HEATING

HEATBOSS SMART HEATER

HEATBOSS SMART HEATER – OFF PEAK

Our incredible Heatboss smart heating system works with your smart meter or off-peak electricity. Combining the ability to store off-peak power with its intelligent programming and energy management features, ensures you maximise energy savings and reduce your power bills for heating.

- ◆ Allows 2 charging periods per day to set the available off-peak tariff period & a solar priority charging period.
- ◆ The smart indoor controller manages precise control over the released heat.
- ◆ Available in 3 sizes.

WHY CHOOSE HEATPAC STORAGE HEATING?

The intelligent Heatpac storage heating systems work with solar and off-peak electricity to reduce your heating bills, all day and all night. They look smart, are safe, easy to use, and virtually pay for themselves through reduced heating costs. If you have a smart meter, off-peak or rooftop solar power, then a Heatpac storage heater may be the ideal solution for your heating needs.

HEATBOSS PUTS YOU IN CHARGE OF YOUR HEATING BILLS

Inbuilt programming gives you the flexibility to schedule and set optimum comfort levels to suit your lifestyle. In addition, the optional Wi-Fi control allows you to manage your Heatpac system from anywhere using any internet enabled device.

ARE THESE THE SMARTEST HEATING SYSTEMS IN AUSTRALIA?

We think so. Just like a battery, the clever Heatpac systems charge up using the cheapest available electricity, storing the energy, which is released when required to keep you warm right through the longest winter day. Heatpac systems also feature an Integral Energy Manager to learn and determine how much charge is required daily so you're not storing excess energy.

HEATPAC LEARN HOW YOU LIVE

The advanced digital controllers have smart adaptive features and intelligent output control to manage your energy consumption and learn the heating needs of your home over time, constantly adjusting the energy required to keep you comfortable without wasting energy unnecessarily.

HEATWAVE SOLAR HEATER

HEATWAVE LARGE CAPACITY SOLAR HEATER

Our unique Heatwave solar heating system is the perfect choice if you have roof top solar power or think you may install it sometime soon. It can use any spare solar energy that your system produces to make free heat for your home. It's true, free heating!

- ◆ Extra heating capacity for larger areas
- ◆ 32kWh thermal storage
- ◆ External controls
